EMERGENCY DEPARTMENT — MEDICAL RECORD

Patient Name:	Maria Rodriguez	Date of Birth:	04/12/1988
Address:	4521 Bay Shore Blvd, Tampa, FL 33611	Phone:	(813) 555-0192
Date of Accident:	01/08/2025	Account #:	TGH-2025-00847

VISIT INFORMATION

Date of Service:	January 8, 2025	Time of Arrival:	14:37
Visit Type:	Emergency	Discharge Time:	19:52
Chief Complaint:	Motor vehicle accident — neck and back pain, headache		
Attending Physician:	James Whitfield, MD	ED Nurse:	R. Nguyen, RN
MRN:	TGH-MRN-88412	Claim #:	INS-FL-2025-009134

HISTORY OF PRESENT ILLNESS

Ms. Rodriguez is a 36-year-old female who presents to the emergency department following a motor vehicle accident that occurred today, January 8, 2025, at approximately 13:15. Patient reports she was a restrained driver traveling southbound on I-275 when her vehicle was struck from behind by another vehicle at highway speed. Patient was transported via EMS (Sunstar Paramedics, Unit 47). She complains of significant neck pain and stiffness, low back pain, and headache beginning shortly after impact. Patient denies loss of consciousness. **Patient denies any prior history of neck or back pain. Patient denies prior treatment for musculoskeletal complaints.** No prior motor vehicle accidents. No known allergies. Current medications: oral contraceptive (Sprintec), multivitamin.

PHYSICAL EXAMINATION

General: Alert and oriented x3. Moderate distress secondary to pain. GCS 15.

Vital Signs: BP 138/84 | HR 96 | RR 18 | Temp 98.6°F | ■ Sat 99% RA

HEENT: Normocephalic. No scalp lacerations. PERRL 4mm bilaterally. No hemotympanum.

Cervical Spine: Significant tenderness to palpation at C4-C5 level. Range of motion markedly limited in flexion and extension. Paraspinal muscle spasm noted bilaterally. No midline bony tenderness.

Lumbar Spine: Tenderness to palpation L4-L5. Paraspinal muscle guarding. Straight leg raise negative bilaterally.

Neurological: Cranial nerves II-XII intact. Motor strength 5/5 upper and lower extremities. Sensation intact. DTRs 2+ and symmetric. No focal deficits.

Extremities: No obvious deformity. Peripheral pulses intact. No edema.

DIAGNOSTIC STUDIES

Study	Result	Ordered By
CT Head (non-contrast)	No intracranial hemorrhage. No acute bony injury.	J. Whitfield, MD

CT Cervical Spine	No fracture or malalignment. Soft tissue swelling anterior C4-C5	Whitfield, MD
X-Ray Lumbar Spine (2-view)	No acute fracture. Mild disc space narrowing L4-L5.	J. Whitfield, MD
CBC, CMP, Coagulation Panel	Within normal limits.	J. Whitfield, MD

ASSESSMENT & PLAN

- Cervical sprain/strain (ICD-10: S13.4XXA)** — secondary to motor vehicle accident. Applied rigid cervical collar. Patient instructed to wear x 72 hours.
- Lumbar contusion (ICD-10: S30.01XA)** — paraspinal muscle guarding and point tenderness. Ice/heat alternating, activity restriction.
- Mild concussion without loss of consciousness (ICD-10: S09.90XA)** — postconcussive headache. Concussion return-to-activity protocol discussed. Head CT negative for hemorrhage.

Medications Prescribed at Discharge:

Medication	Dose	Frequency	Quantity	Duration
Ibuprofen 800mg	800mg	TID with food	#42 tabs	14 days
Cyclobenzaprine 10mg	10mg	TID PRN spasm	#21 tabs	7 days

Discharge Instructions: Return to ED immediately for worsening headache, vision changes, numbness/tingling, or weakness in arms or legs. Follow up with primary care physician within 3-5 days. Recommend orthopedic spine consultation given mechanism of injury.

BILLING & CHARGES

Service Description	CPT Code	Billed	Insurance Paid	Balance
Emergency Department Level 4 Visit	99284	\$3,200.00	\$1,280.00	\$1,920.00
CT Head w/o contrast	70450	\$1,450.00	\$540.00	\$910.00
CT Cervical Spine w/o contrast	72125	\$1,650.00	\$780.00	\$870.00
X-Ray Lumbar Spine 2 views	72100	\$420.00	\$280.00	\$140.00
Laboratory Panel (CBC, CMP)	80053	\$480.00	\$180.00	\$300.00
Cervical Collar Application	A4570	\$250.00	\$140.00	\$110.00
TOTAL		\$8,450.00	\$3,200.00	\$4,250.00

RADIOLOGY REPORT

Patient Name:	Maria Rodriguez	Date of Birth:	04/12/1988
Address:	4521 Bay Shore Blvd, Tampa, FL 33611	Phone:	(813) 555-0192
Date of Accident:	01/08/2025	Account #:	TGH-2025-00847

EXAMINATION 1: MRI CERVICAL SPINE WITHOUT CONTRAST

Date of Service:	January 15, 2025	Accession #:	AIT-2025-C-00293
Ordering Provider:	James Whitfield, MD — TGH-ED	Referring Dx:	S13.4XXA
Radiologist:	Sarah Chen, MD, FRCR	Report Date:	01/15/2025 — 16:42
Modality:	3.0 Tesla MRI (Siemens Prisma)	Sequences:	Sag T1, Sag T2, Axial T2, STIR

CLINICAL INDICATION: Motor vehicle accident 01/08/2025. Cervical pain and radiculopathy. Evaluate for disc pathology.

TECHNIQUE: Multiplanar, multisequence MRI of the cervical spine performed on a 3.0 Tesla magnet without intravenous contrast administration.

FINDINGS:

- Vertebral body heights and alignment are maintained throughout.
- No fracture or dislocation identified.
- C3-C4: Disc space preserved. No significant disc herniation. Mild uncovertebral joint hypertrophy.
- **C4-C5: Posterior disc herniation measuring 4.2mm with moderate right-sided foraminal stenosis. Mild mass effect on the right ventral thecal sac. Contact but no compression of the right C5 nerve root sleeve.**
- C5-C6: Disc space preserved. Mild bilateral facet arthropathy.
- C6-C7: Minimal disc bulge without significant stenosis.
- Spinal cord: Normal cord signal and caliber throughout. No myelopathy.
- Paravertebral soft tissues: Increased T2 signal in bilateral paraspinal musculature at C4-C6 level, consistent with acute muscle strain/edema.
- No epidural hematoma or abscess.

IMPRESSION:

1. Posterior disc herniation at C4-C5 with moderate right foraminal stenosis and contact of the right C5 nerve root sleeve. Clinical correlation recommended.
2. Bilateral paraspinal muscle edema C4-C6, consistent with acute traumatic strain.
3. Mild degenerative changes at C5-C6. No acute fracture or cord signal abnormality.

EXAMINATION 2: MRI LUMBAR SPINE WITHOUT CONTRAST

Date of Service:	January 15, 2025	Accession #:	AIT-2025-L-00294
Ordering Provider:	James Whitfield, MD — TGH-ED	Referring Dx:	S30.01XA

Radiologist:	Sarah Chen, MD, FRCR	Report Date:	01/15/2025 — 17:08
Modality:	3.0 Tesla MRI (Siemens Prisma)	Sequences:	Sag T1, Sag T2, Axial T2, STIR

CLINICAL INDICATION: Motor vehicle accident 01/08/2025. Lumbar pain. Evaluate for disc pathology.

FINDINGS:

- Vertebral body heights maintained L1-S1. Normal lumbar lordosis.
- No compression fracture or acute bony injury.
- L1-L2, L2-L3, L3-L4: Discs preserved. No significant pathology.
- **L4-L5: Broad-based disc bulge with mild bilateral foraminal narrowing. Minimal flattening of the ventral thecal sac. No nerve root compression.**
- L5-S1: Disc space preserved. No herniation.
- Conus medullaris at L1-L2 level, normal signal.
- Paraspinal musculature: Mild increased T2 signal L4-S1, consistent with strain.
- No spondylolysis or spondylolisthesis.

IMPRESSION:

1. L4-L5 broad-based disc bulge with mild bilateral foraminal narrowing, without frank nerve root compression. Findings are consistent with post-traumatic exacerbation in the setting of recent MVA.
2. Mild paraspinal muscle strain L4-S1.
3. No acute fracture, cord signal abnormality, or surgical emergency.

BILLING SUMMARY

ORTHOPEDIC SPINE CONSULTATION & FOLLOW-UP NOTES

Patient Name:	Maria Rodriguez	Date of Birth:	04/12/1988
Address:	4521 Bay Shore Blvd, Tampa, FL 33611	Phone:	(813) 555-0192
Date of Accident:	01/08/2025	Account #:	TGH-2025-00847

VISIT 1 — INITIAL CONSULTATION

Date of Service: January 22, 2025 | **Provider:** Michael Torres, MD, FAAOS | **Visit Type:** New Patient / Consultation

Patient is a 36-year-old female referred from Tampa General Hospital ED following motor vehicle accident on 01/08/2025. She presents with persistent cervical and lumbar pain rated 7/10 at rest, 9/10 with movement. She reports radiating pain into the right upper extremity with numbness in the right thumb and index finger. Lumbar pain radiates to the left buttock. Sleep is significantly disrupted. Unable to return to work (medical transcriptionist, sedentary).

MRI Review (01/15/2025): C4-C5 disc herniation with right foraminal stenosis confirmed. L4-L5 disc bulge with bilateral foraminal narrowing.

DIAGNOSES:

- Cervical disc herniation C4-C5 with right C5 radiculopathy (ICD-10: M50.122)
- Lumbar disc displacement with radiculopathy (ICD-10: M51.16)

PLAN:

1. Physical therapy prescribed: 3x/week for 8 weeks. Focus on cervical and lumbar stabilization, traction, and myofascial release. PT order attached.
2. Medrol dose pack (methylprednisolone) x 6-day taper for acute inflammation.
3. Referral to pain management (Florida Pain & Spine Institute) for consideration of cervical epidural steroid injection if symptoms do not improve with conservative care.
4. Restrict heavy lifting (>10 lbs), prolonged sitting >30 minutes without break, no overhead activities.
5. Return to clinic in 2 weeks for reassessment.

VISIT 2 — FOLLOW-UP

Date of Service: February 5, 2025 | **Provider:** Michael Torres, MD, FAAOS | **Visit Type:** Follow-Up

Patient has completed 6 PT sessions. Reports mild improvement in lumbar symptoms (pain 5/10 at rest) but continued significant cervical pain with radiculopathy unchanged. Right hand grip strength mildly reduced. Paresthesias in right thumb and index finger persist. Sleeping better with body pillow support.

Physical Exam: Spurling's test positive right side. Motor strength right hand grip 4/5. Reflexes intact. Cervical range of motion remains limited — flexion 30°, extension 20° (normal 45°/45°). Pain management consult appointment scheduled 03/10/2025.

Plan: Continue PT. Pain management referral confirmed. Patient remains off work pending further evaluation.

VISIT 3 — FOLLOW-UP

Date of Service: February 19, 2025 | **Provider:** Michael Torres, MD, FAAOS | **Visit Type:** Follow-Up

Patient has now completed 13 of 16 prescribed PT sessions. Lumbar pain improved to 3/10. Cervical symptoms partially improved. Right upper extremity paresthesias mildly improved. Patient to proceed with cervical ESI at Florida Pain & Spine Institute on 03/10/2025. Follow up post-procedure.

Work Status: Patient remains temporarily disabled. Light duty work restrictions in place. Anticipated MMI at 6 months post-accident (July 2025) pending response to interventional treatment.

INTERVENTIONAL PAIN PROCEDURE NOTE

Patient Name:	Maria Rodriguez	Date of Birth:	04/12/1988
Address:	4521 Bay Shore Blvd, Tampa, FL 33611	Phone:	(813) 555-0192
Date of Accident:	01/08/2025	Account #:	TGH-2025-00847

Date of Service:	March 10, 2025	Start Time:	10:15
Procedure:	Cervical Epidural Steroid Injection	End Time:	10:42
Location:	C4-C5 interlaminar approach	ASA Class:	II
Attending Provider:	Amanda Patel, MD	Anesthesia:	Conscious Sedation
Anesthesiologist:	Robert Kim, MD	Facility:	FPSI Procedure Suite

PRE-PROCEDURE ASSESSMENT

Patient is a 36-year-old female with C4-C5 disc herniation and right C5 radiculopathy following MVA on 01/08/2025. Conservative management including physical therapy (completed 13 of 16 sessions) and oral medications has provided only partial relief. Patient continues to experience cervical pain 6/10 with right upper extremity radiation and paresthesias affecting right thumb and index finger. Patient and risks/benefits of the procedure discussed at length. Informed consent obtained.

Contraindications reviewed: No active infection, no anticoagulation, no known contrast allergy, INR within normal limits, NPO x 6 hours. Consent signed. Time-out completed.

PROCEDURE DETAILS

Patient was positioned prone on the fluoroscopy table. Conscious sedation administered by Dr. Kim (Midazolam 2mg IV, Fentanyl 50mcg IV). Vital signs monitored continuously throughout the procedure. The posterior neck was prepped and draped in a sterile fashion.

Under continuous fluoroscopic guidance (GE OEC Elite C-arm), the C4-C5 interlaminar epidural space was accessed using a 17-gauge Tuohy needle via loss-of-resistance technique. Epidurogram with 2mL Omnipaque 240 contrast confirmed epidural flow pattern with appropriate bilateral spread and no intravascular uptake.

Injectate: Betamethasone 12mg (2mL) + Bupivacaine 0.25% (2mL) + Normal Saline (1mL) = 5mL total volume injected incrementally without complication.

Patient tolerated the procedure well. No immediate complications. Recovered in PACU for 45 minutes. Vital signs stable upon discharge. Patient escorted home by designated driver per sedation protocol.

POST-PROCEDURE INSTRUCTIONS

No driving or operating machinery for 24 hours. Ice to injection site PRN. Resume physical therapy in 48 hours. Avoid NSAIDs for 48 hours post-injection. Blood sugar monitoring advised for 3-5 days (corticosteroid effect). Follow up 4 weeks or sooner if increased pain, fever, or neurological changes.

SESSION LOG

Date	#	Treatment Note
02/01/2025	1	Initial eval. Baseline measurements. Cervical AROM: F30°/E20°. Manual therapy cervical, lumbar. Therapeutic exercise program initiated.
02/03/2025	2	Cervical traction 15 lbs x 12 min. TENS. Hot pack. HEP reviewed.
02/05/2025	3	Lumbar stabilization exercises. Core strengthening. Myofascial release lumbar paraspinals.
02/08/2025	4	Cervical AROM improving: F38°/E27°. Neural gliding exercises. TENS bilateral upper extremities.
02/10/2025	5	Therapeutic exercise progression. Balance/proprioception. Patient reports improved sleep.
02/12/2025	6	Manual therapy cervical and thoracic. Joint mobilization grade III. Patient tolerating well.
02/15/2025	7	Cervical traction 18 lbs. Right UE strengthening. Paresthesias mildly improved.
02/19/2025	8	Lumbar stabilization. Resistance band exercises. Pain 5/10 (from 7/10 initial).
02/22/2025	9	Aquatic therapy introduction. Buoyancy-assisted cervical AROM.
02/26/2025	10	Progress note. Patient at 60% functional capacity. Continue plan.
03/01/2025	11	Therapeutic exercise advancement. Core endurance training.
03/05/2025	12	Cervical traction 20 lbs. Manual therapy. Myofascial release.
03/08/2025	13	Pre-injection session. Gentle mobilization only per MD instruction.
03/15/2025	14	Post-injection (03/10/25) session. Gentle ROM. Patient reports 40% improvement cervical symptoms.
03/22/2025	15	Strengthening progression. Scapular stabilization. Postural re-education.
03/28/2025	16	Discharge assessment. Final AROM: F52°/E41°. Significant functional improvement. Discharged to HEP.
